Data Center Tour	25,000.00	Each	-	Fixed cost for one data center tour.	B93703

Database Management and Ops Insights for MySQL External; and Oracle Integration Cloud Service for Oracle SaaS

The following services are not eligible for purchase using Universal Credits.

	Monthly Subscription Price	Metric	Metric Minimum	Additional Information	Part Number
Database Management for MySQL External - Non Metered					
Database Management for MySQL External - Non Metered	15.00	Host CPU Core Per Month	-		B110425
Ops Insights for MySQL External - Non Metered					
Ops Insights for MySQL External - Non Metered	15.00	Host CPU Core Per Month	-		B109503
	Monthly Subscription Price	Metric	Metric Minimum	Additional Information	Part Number
Oracle Integration Cloud Service for Oracle SaaS					
Oracle Integration Cloud Service for Oracle SaaS - Standard	600.00	1 Million Messages	2		B91109
Oracle Integration Cloud Service for Oracle SaaS - Enterprise	1,200.00	1 Million Messages	2		B91110

Note: Standard term length is a 4-year term. For additional information, refer to the Oracle Cloud Approval Matrix document on eSource.

The following services are not available for purchase using Universal Credits:

	Monthly Subscription Price	Metric	Minimum	Service Includes Per Month	Part Number
Oracle Big Data Cloud at Customer					
Oracle Big Data Cloud at Customer - Starter Pack - 3 Nodes - Non-metered	14,400.00	Hosted Environment	-	3 nodes with 32 OCPU's per node. 256 GB RAM and 48 TB of raw storage per node. Big Data Connectors (includes a restricted-use: Oracle Data Integrator Enterprise Edition), and Big Data Spatial and Graph. Unlimited I/Os. Infrastructure managed and operated by Oracle.	B87918
Oracle Big Data Cloud at Customer - Additional Nodes - Non-metered	4,800.00	Hosted Nodes	-	1 nodes with 32 OCPU's per node. 256 GB RAM and 48 TB of raw storage per node. Big Data Connectors (includes a restricted-use: Oracle Data Integrator Enterprise Edition), and Big Data Spatial and Graph. Unlimited I/Os. Infrastructure managed and operated by Oracle.	B87919

Section 3 - Cloud@Customer

IaaS Non-metered: Oracle Compute Cloud@Customer

Prices in US Dollar

Note: Standard term length is a 4-year term. For additional information, refer to the Oracle Cloud Approval Matrix document on eSource.

The following services are not available for purchase using Universal Credits:

	Monthly Subscription Price	Metric	Minimum	Additional Information	Part Number
Oracle Compute Cloud@Customer - Base System					
Oracle Compute Cloud@Customer Infrastructure - X10 - Base System with up to 552 OCPUs, 6.7 TB Memory, and 150 TB Usable Storage - Non-Metered	10,600.00	Hosted Environment Per Month	-		B96571
Oracle Compute Cloud@Customer Infrastructure - X10 - Base System with up to 1,104 OCPUs, 13.4 TB Memory, and 150 TB Usable Storage - Non-Metered	15,500.00	Hosted Environment Per Month	-		B96572
Oracle Compute Cloud@Customer Infrastructure - X10 - Base System with up to 1,656 OCPUs, 20.1 TB Memory, and 150 TB Usable Storage - Non-Metered	20,400.00	Hosted Environment Per Month	-		B96573
Oracle Compute Cloud@Customer Infrastructure - X10 - Base System with up to 2,208 OCPUs, 26.8 TB Memory, and 150 TB Usable Storage - Non-Metered	25,300.00	Hosted Environment Per Month	-		B96574

	Monthly Subscription Price	Metric	Metric Minimum	Additional Information	Part Number
Oracle Compute Cloud@Customer - Compute Expansions					
Oracle Compute Cloud@Customer Infrastructure - E5 Compute with up to 552 OCPUs and 6.7 TB Memory - Non-Metered	4,900.00 x Rack Term Factor	Hosted Environment Per Month	-	See Note 16 for Rack Term Factor calculation.	B96577
Oracle Compute Cloud@Customer - Storage Expansions					
Oracle Compute Cloud@Customer Infrastructure - Balanced Storage Supporting up to 175 TB Usable Storage - Non-Metered	800.00 x Rack Term Factor	Hosted Environment Per Month	-	See Note 16 for Rack Term Factor calculation.	B96575
Oracle Compute Cloud@Customer Infrastructure - Performance Storage Supporting up to 60TB Usable Storage - Non-Metered	1,900.00 x Rack Term Factor	Hosted Environment Per Month	-	See Note 16 for Rack Term Factor calculation.	B96576
Oracle Compute Cloud@Customer - GPU Expansions					
Oracle Compute Cloud@Customer Infrastructure - GPU Compute with up to 4 GPUs, 48 GB GPU memory, 108 OCPUs and 960 GB CPU memory - Non-metered	2,275.00 x Rack Term Factor	Hosted Environment Per Month	-	See Note 16 for Rack Term Factor calculation.	B110963

The following service is not available for purchase using Universal Credits:

	Price	Metric	Minimum	Additional Information	Part Number
Oracle Compute Cloud@Customer Infrastructure Installation and Activation Service					
Oracle Compute Cloud@Customer Infrastructure Installation and Activation Service	30,000.00	Each	-	This service is mandatory and required for each Oracle Compute Cloud@Customer Infrastructure - X10 - Base System.	B97436

Oracle Cloud at Customer - X6					
Oracle Cloud at Customer X6 Compute - Non-metered	3,000.00		Each	- 40 OCPUs. IaaS service operated by Oracle.	B87824
Oracle Cloud at Customer ZS5 Block Storage High I/O - Non-Metered	4,300.00		Each	- 22 terabytes of storage. IaaS service operated by Oracle.	B89720
Oracle Cloud at Customer X6 Object Storage - Non-metered	4,200.00		Each	- 128 terabytes of storage. IaaS service operated by Oracle.	B87826

Section 3a - Cloud@Customer - Partner Hardware*

*Note: Section 3a represents Cloud at Customer - Partner Hardware only.

Prices in US Dollar

IaaS Non-metered: Compute Cloud@Customer Infrastructure - X10 - Partner Hardware

Note: Standard term length is a 4-year term. For additional information, refer to the Oracle Cloud Approval Matrix document on eSource.

Note: The "Partner Hardware"-specific named SKUs below are only applicable to partners in countries where Oracle has no legal entity and the VAD/VAR takes ownership of the hardware. All other partners outside this VAD/VAR Partner Hardware ownership model should use the same SKUs used by Oracle direct sales.

The following services are not available for purchase using Universal Credits.

	Monthly Subscription Price	Metric	Minimum	Additional Information	Part Number
Oracle Compute Cloud@Customer - Base System - Partner Hardware					
Oracle Compute Cloud@Customer Infrastructure - X10 - Base System with up to 552 OCPUs, 6.7 TB memory, and 150 TB usable storage - Non-metered - Partner Hardware	10,600.00	Hosted Environment Per Month	-		B108966
Oracle Compute Cloud@Customer Infrastructure - X10 - Base System with up to 1,104 OCPUs, 13.4 TB memory, and 150 TB usable storage - Non-metered - Partner Hardware	15,500.00	Hosted Environment Per Month	-		B108967
Oracle Compute Cloud@Customer Infrastructure - X10 - Base System with up to 1,656 OCPUs, 20.1 TB memory, and 150 TB usable storage - Non-metered - Partner Hardware	20,400.00	Hosted Environment Per Month	-		B108968
Oracle Compute Cloud@Customer Infrastructure - X10 - Base System with up to 2,208 OCPUs, 26.8 TB memory, and 150 TB usable storage - Non-metered - Partner Hardware	25,300.00	Hosted Environment Per Month	-		B108969

	Monthly Subscription Price	Metric	Metric Minimum	Additional Information	Part Number
Oracle Compute Cloud@Customer - Compute Expansions - Partner Hardware					
Oracle Compute Cloud@Customer Infrastructure - E5 Compute with up to 552 OCPUs and 6.7 TB memory - Non-metered - Partner Hardware	4,900.00 x Rack Term Factor	Hosted Environment Per Month	-	See Note 16 for Rack Term Factor calculation.	B108972
Oracle Compute Cloud@Customer - Storage Expansions - Partner Hardware					
Oracle Compute Cloud@Customer Infrastructure - Balanced Storage supporting up to 175 TB usable storage - Non-metered - Partner Hardware	800.00 x Rack Term Factor	Hosted Environment Per Month	-	See Note 16 for Rack Term Factor calculation.	B108970
Oracle Compute Cloud@Customer Infrastructure - Performance Storage supporting up to 60TB usable storage - Non-metered - Partner Hardware	1,900.00 x Rack Term Factor	Hosted Environment Per Month	-	See Note 16 for Rack Term Factor calculation.	B108971
Oracle Compute Cloud@Customer - GPU Expansions - Partner Hardware					
Oracle Compute Cloud@Customer Infrastructure - GPU Compute with up to 4 GPUs, 48 GB GPU memory, 108 OCPUs and 960 GB CPU memory - Non-metered - Partner Hardware	2,275.00 x Rack Term Factor	Hosted Environment Per Month	-	See Note 16 for Rack Term Factor calculation.	B110964

Section 3a - Cloud@Customer - Partner Hardware*

*Note: Section 3a represents Cloud at Customer - Partner Hardware only.

PaaS Non-metered: Exadata Cloud@Customer Infrastructure - X11M - Partner Hardware

Note: Standard term length is a 4-year term. For additional information, refer to the Oracle Cloud Approval Matrix document on eSource.

Note: The "Partner Hardware"-specific named SKUs below are only applicable to partners in countries where Oracle has no legal entity and the VAD/VAR takes ownership of the hardware. All other partners outside this VAD/VAR Partner Hardware ownership model should use the same SKUs used by Oracle direct sales.

The following services are not available for purchase using Universal Credits.

	Monthly Subscription Price	Metric	Metric Minimum	Additional Information	Part Number
Exadata Cloud@Customer - X11M					
Exadata Cloud@Customer - Base System Rack - X11M - Partner Hardware	3,200.00	Hosted Environment Per Month	-	0 enabled OCPUs 60 maximum OCPUs2 DB nodes with 660 GB RAM per node usable Additional 3x Storage servers required.	B110648
Exadata Cloud@Customer - Rack - X11M - Partner Hardware	4,320.00	Hosted Environment Per Month	-	0 enabled OCPUs 380 maximum OCPUs2 DB nodes with 1390 GB RAM per node usable Additional 3x Storage servers required.	B110649
Exadata Cloud@Customer - Rack - X11M - L - Partner Hardware	5,760.00	Hosted Environment Per Month	-	0 enabled OCPUs 380 maximum OCPUs2 DB nodes with 2,090 GB RAM per node usable Additional 3x Storage servers required.	B110650
Exadata Cloud@Customer - Rack - X11M - XL - Partner Hardware	9,000.00	Hosted Environment Per Month	-	0 enabled OCPUs 380 maximum OCPUs2 DB nodes with 2,800 GB RAM per node usable Additional 3x Storage servers required.	B110651
Exadata Cloud@Customer - X11M - Rack Expansions					
Exadata Cloud@Customer - Expansion Rack - X11M - Partner Hardware	2,160.00 x Rack Term Factor	Hosted Environment Per Month	-	1 Storage server included. Additional 3x Database or Storage servers required.	B110654
Exadata Cloud@Customer - X11M - Database Server Expansions					
Exadata Cloud@Customer - Base System Database Server - X11M - Partner Hardware	1,600.00 x Rack Term Factor	Hosted Environment Per Month	-	Database Server with 30 OCPU and 660 GB usable memory.	B110655
Exadata Cloud@Customer - Database Server - X11M - Partner Hardware	2,160.00 x Rack Term Factor	Hosted Environment Per Month	-	Database Server with 190 OCPU and 1390 usable memory.	B110656
Exadata Cloud@Customer - Database Server - X11M - L - Partner Hardware	2,880.00 x Rack Term Factor	Hosted Environment Per Month	-	Database Server with 190 OCPU and 2090 GB usable memory.	B110657
Exadata Cloud@Customer - Database Server - X11M - XL - Partner Hardware	4,500.00 x Rack Term Factor	Hosted Environment Per Month	-	Database Server with 190 OCPU and 2800 GB usable memory.	B110658
Exadata Cloud@Customer - X11M - Storage Server Expansions					
Exadata Cloud@Customer - Base System Storage Server - X11M - Partner Hardware	1,600.00 x Rack Term Factor	Hosted Environment Per Month	-	Storage Server with 35 TB usable storage.	B110659
Exadata Cloud@Customer - Storage Server - X11M - Partner Hardware	2,160.00 x Rack Term Factor	Hosted Environment Per Month	-	Storage Server with 80 TB usable storage.	B110661

PaaS Non-metered: Exadata Cloud@Customer Infrastructure - X10M - Partner Hardware

Note: Standard term length is a 4-year term. For additional information, refer to the Oracle Cloud Approval Matrix document on eSource.

Note: The "Partner Hardware"-specific named SKUs below are only applicable to partners in countries where Oracle has no legal entity and the VAD/VAR takes ownership of the hardware. All other partners outside this VAD/VAR Partner Hardware ownership model should use the same SKUs used by Oracle direct sales.

NOTE: All new sales of *Exadata Cloud@Customer Infrastructure - X10M* requires B91390 - Gen 2 Exadata Cloud at Customer Installation and Activation Service. This service is mandatory and is required for each rack of *Gen 2 Exadata Cloud at Customer Infrastructure - X9M*.

The following services are not available for purchase using Universal Credits.

	Monthly Subscription Price	Metric	Metric Minimum	Additional Information	Part Number
Exadata Cloud@Customer - X10M					
Exadata Cloud@Customer - Quarter Rack - X10M - Partner Hardware	10,800.00	Hosted Environment Per Month	-	Minimum of 48 months. 1.5 terabyte database server.	B96617
Exadata Cloud@Customer - Quarter Rack - X10M - L - Partner Hardware	12,240.00	Hosted Environment Per Month	-	Minimum of 48 months. 2.25 terabyte database server.	B98124
Exadata Cloud@Customer - Quarter Rack - X10M - XL - Partner Hardware	15,480.00	Hosted Environment Per Month	-	Minimum of 48 months. 3 terabyte database server.	B96618
Exadata Cloud@Customer - X10M - Expansions					
Exadata Cloud@Customer - Database Server - X10M - Partner Hardware	2,160.00 x Rack Term Factor	Hosted Environment Per Month	-	Minimum of 12 months. 1.5 terabyte database server. See Note 16 for Rack Term Factor calculation.	B96620
Exadata Cloud@Customer - Database Server - X10M - L - Partner Hardware	2,880.00 x Rack Term Factor	Hosted Environment Per Month	-	Minimum of 12 months. 2.25 terabyte database server. See Note 16 for Rack Term Factor calculation.	B98125
Exadata Cloud@Customer - Database Server - X10M - XL - Partner Hardware	4,500.00 x Rack Term Factor	Hosted Environment Per Month	-	Minimum of 12 months. 3 terabyte database server. See Note 16 for Rack Term Factor calculation.	B96621
Exadata Cloud@Customer - Base System Storage Server - X10M - Partner Hardware	1,600.00 x Rack Term Factor	Hosted Environment Per Month	-	Minimum of 12 months. See Note 16 for Rack Term Factor calculation.	B96622
Exadata Cloud@Customer - Storage Server - X10M - Partner Hardware	2,160.00 x Rack Term Factor	Hosted Environment Per Month	-	Minimum of 12 months. See Note 16 for Rack Term Factor calculation.	B96623
Exadata Cloud@Customer - Expansion Rack - X10M - Partner Hardware	2,160.00 x Rack Term Factor	Hosted Environment Per Month	-	Minimum of 12 months. See Note 16 for Rack Term Factor calculation.	B96624
Gen 2 Exadata Cloud at Customer Installation and Activation Service					
Gen 2 Exadata Cloud at Customer Installation and Activation Service	30,000.00	Each	-	Installation of hardware, software, and activation of service. This service is mandatory and required for each rack.	B91390

Section 3a - Cloud@Customer - Partner Hardware*

*Note: Section 3a represents Cloud at Customer - Partner Hardware only.

Prices in US Dollar

PaaS Non-metered: Gen 2 Exadata Cloud@Customer Infrastructure - X8 - Partner Hardware

NOTE: Gen 2 Exadata Cloud at Customer Infrastructure - X8 listed below are specifically for resell by Oracle PartnerNetwork (OPN) members only and cannot be sold by Oracle direct sales.

Note: Standard term length is a 4-year term. For additional information, refer to the Oracle Cloud Approval Matrix document on eSource.

Note: The “Partner Hardware”-specific named SKUs below are only applicable to partners in countries where Oracle has no legal entity and the VAD/VAR takes ownership of the hardware. All other partners outside this VAD/VAR Partner Hardware ownership model should use the same SKUs used by Oracle direct sales.

NOTE: All new sales of Gen 2 Exadata Cloud at Customer Infrastructure - X8 requires B91390 - Gen 2 Exadata Cloud at Customer Installation and Activation Service. This service is mandatory and is required for each rack of Gen 2 Exadata Cloud at Customer Infrastructure - X8.

The following services are not available for purchase using Universal Credits.

	Monthly Subscription Price	Metric	Minimum	Service Includes Per Month	Part Number
Gen 2 Exadata Cloud at Customer Infrastructure - X8 - Partner Hardware					
Gen 2 Exadata Cloud@Customer - Database Server - X8 - Partner Hardware - Non-Metered	2,700.00	Hosted Environment Per Month	-	Minimum of 48 hours.	B91043
Gen 2 Exadata Cloud at Customer Storage Server X8 - Partner Hardware - Non-metered	2,700.00	Hosted Environment Per Month	-		B91041
Gen 2 Exadata Cloud@Customer Base System - Database Server Infrastructure IB - Partner Hardware - Non-Metered	2,000.00	Hosted Environment Per Month	-	Minimum of 48 hours.	B91044
Gen 2 Exadata Cloud at Customer Base System Storage Server - X-IB - Partner Hardware - Non-metered	2,000.00	Hosted Environment Per Month	-		B91042
Gen 2 Exadata Cloud at Customer Installation and Activation Service					
Gen 2 Exadata Cloud at Customer Installation and Activation Service	30,000.00	Each	-	Installation of hardware, software, and activation of service. This service is mandatory and required for each rack.	B91390

OCPUs for Gen 2 Exadata Cloud at Customer Infrastructure - X8 are available for purchase through the Universal Credits model. For reference, repeated below from the Universal Credits section of this price list (from Section I) are the available OCPU services (i.e., Oracle Cloud Infrastructure - Exadata Cloud at Customer - Database OCPU) that enable OCPUs to be added to Gen 2 Exadata Cloud at Customer Infrastructure - X8.

NOTE: Universal Credits cannot be used to purchase Gen 2 Exadata Cloud at Customer Infrastructure - X8 (listed directly above).

Oracle Cloud at Customer X6 Object Storage - Partner Hardware - Non-metered	4,200.00	Each	-	128 terabytes of storage. IaaS service operated by Oracle.	B87917

Section 4 - Metrics and Metric Definitions

API Call: is defined as any API call or notification consumed by any application built on the service.

API Calls: is defined as the number of calls incoming from a client to the Oracle Cloud Infrastructure Threat Intelligence Service endpoint. A call may include GET or LIST commands to retrieve certain threat intelligence indicator data from the Oracle Cloud Infrastructure Threat Intelligence Service endpoint. Calls are metered on a per tenancy basis. Each search in the console or call to the API is considered an API call for the purposes of metering.

Active Process User Per Hour: is defined as a unique active user that interacts with the Oracle Cloud Service for any task where registered users could be Development, Design, Operations, Invocation or Participant users during a 1-hour period across the Designer or Workspace UIs. A user interacting with the Oracle Cloud Service through REST APIs will also be counted. Each single unique user accessing the Oracle Cloud Service multiple times in a one-hour period will be counted as only one Active Process User Per Hour.

Active User Per Hour: Is defined as a unique active user that interacts with the Oracle Cloud Service through a specific channel (website, mobile app, API, SMS) during a 1-hour period. Active users are tracked through the use of audit logs, cookies, user ids, tokens, device ids, IP's or session id's. Access across multiple channels will be counted as multiple active users on an hourly basis. An active user is tracked for each instance of the Oracle Cloud Service.

For the purposes of the Oracle Identity Cloud Service, the interaction with the Service consists of, but is not limited to, specific actions or events performed within the Service (authentication, Single Sign On, user provisioning, step-up authentication, password management, etc.).

For the purposes of the Oracle Content Management and Oracle Content and Experience Cloud Service - Classic, the Service tracks either named users or visitors based upon the role that a user is given in the Service; users with anonymous access to the Service will be tracked as visitors. Visitor access – whether for anonymous or registered visitors - across multiple channels during the same hour counts as multiple active visitor users. In addition, during the same hourly period, the Service also tracks:

- The number of API calls made to the Service by third party applications. If the number of API calls exceeds the number of API calls that are entitled per active user, a new active user will be added.

- The number of published assets. A published asset is either a file-based asset (e.g., a document, an image, or a video) or a content item (a block of information created using a content type) either of which has been published during the hourly period. If the number of published assets exceeds the number of published assets that are entitled per active user, a new active user will be added.

- Outbound data transfer per active user per hour. Outbound data transfer is defined as the quantity during an hour of the Oracle Cloud Service of both the data You download from the Oracle Cloud Service plus any transfer of data from the Oracle Cloud Service over the internet, including responses to Your client requests.

AI Unit Per Hour: is defined as a pre-configured set of infrastructure with a given performance level, billed per hour, dedicated to You for the purposes of hosting or fine-tuning generative AI models. You must maintain a minimum Services Period commitment of 744 hours per hosting cluster and 1 hour per fine-tuning cluster; once the minimum of either is exceeded, You will be billed on a per second basis. You will be charged for dedicated AI clusters units You have created until You delete the units.

Annotated Data Records: is defined as the number of data records that were assigned one or more labels. An annotated data record involves (a) creating one or more bounding boxes to an image, (b) classifying an entire image, document or text, or (c) highlighting part of text, video or speech with labels.

API Calls: is defined as the number of calls incoming from a client to the Oracle Cloud Infrastructure Threat Intelligence Service endpoint. A call may include GET or LIST commands to retrieve certain threat intelligence indicator data from the Oracle Cloud Infrastructure Threat Intelligence Service endpoint. Calls are metered on a per tenancy basis. Each search in the console or call to the API is considered an API call for the purposes of metering.

Cluster Per Hour: is defined as the number of Cluster hours used as part of the Oracle Container Engine for Kubernetes (OKE) service. It is billed per second and measured as the number of OKE Enhanced clusters for a duration measured in seconds – rounded up to the nearest whole number with minimum of 1-minute. A cluster is an instance of the Container Engine for Kubernetes service that includes the control plane that implements core Kubernetes functionality and the cluster data plane comprised of worker nodes that runs the applications that you deploy in a cluster.

Consumer User Per Month: is defined as an identity that is not configured to access the Service through either a user interface or through a programmatic configuration during the billing period, but whose accesses are managed in the Service by Workforce Users (as defined below).

- For the purposes of Oracle Access Governance, non-Workforce Users (these would include, but are not limited to, customers, partners, citizens, and contingent freelance talent whose birth right accesses needs to be managed) shall be deemed to be Consumer Users.

- You will be billed for Consumer Users marked as "Active" in Oracle Access Governance on a monthly basis for the configured Consumer User count metered every hour

CPU Core Per Hour: is defined as the total number of CPU cores of processor hours enabled for monitoring as part of the Oracle Cloud Infrastructure Database Management service. The number of CPU cores shall be determined based upon the total number of CPU cores of the processor on the host, VM or Container on which the target is being monitored, and equals the current number of CPU cores on the system that includes sub-cores of multi-core CPUs, as well as single-core CPUs. The number of sockets multiplied by the number of CPU cores per socket will give the total count of CPU cores. Programs licensed on a CPU core basis may be accessed by your internal users (including agents and contractors) and by your third party users. Each partial CPU core per hour consumed will be billed as a full hour.

Notes:

1. Oracle Database Enterprise or Standard Edition processor count definition, policy and limits do not apply.
2. Multiple targets running on the same hosts, VMs, or Containers will be counted only once for licensing purposes.
3. CPU cores of each instance of Oracle Real Application Clusters must be counted.
4. If You are using a standby database and Data Guard is monitored and managed by the Oracle Cloud Infrastructure Database Management Service, then CPU cores of these instances must also be counted for licensing purposes.
5. On Exadata systems, CPU cores on all the database instance hosts must be counted for licensing purposes, however CPU cores of Exadata Storage Server need not be counted for licensing purposes.

Desktop Per Month: is defined as a unique desktop instance accessed by a single user that interacts with the Oracle Cloud Service through a specific channel (website, mobile app, API, SMS) during a one-month period. Desktops are grouped into pools and charged at pool creation, regardless of whether or not a user is accessing the desktop.

Device: is defined as a unique device that transmits data to or receives data from Oracle applications or Oracle Cloud Services. Devices include, but are not limited to, sensors, meters, RFID readers, and barcode scanners. A Device that is connected directly to Oracle applications or Cloud Services, or connected indirectly such as through a gateway device or a third-party communications service, is uniquely identified as being the endpoint of communication of data to or from the Oracle application or Oracle Cloud Service. A Device may also be registered with the Oracle application or Cloud Service, uniquely identifying it as the endpoint of communication.

ECPU Per Hour: is based on the number of cores per hour elastically allocated from a pool of compute and storage servers. For the purposes of MySQL Database and MySQL HeatWave, ECPU Per Hour is a platform-independent measure of the work done per hour by the MySQL Database and MySQL HeatWave.

Endpoint Per Hour: is defined as the number of endpoints provisioned and made available for Your use per hour as part of the Oracle Cloud Service.

For the purposes of MySQL HeatWave on AWS, endpoints are defined as the number of Ingress Private Endpoints or Egress Private Endpoints that are provisioned and made available for Your use per AWS AZ in one hour. You will be billed for each endpoint provisioned and made available for use during a part of an hour, with a one-minute minimum.

Endpoint Per Month: for the purposes of Oracle Cloud Infrastructure - Health Checks - Premium; and Oracle Cloud Infrastructure - Health Checks - Basic, Endpoints Per Month is defined as the number of endpoints (IP addresses or HTTP targets) monitored from up to 10 locations for each protocol (HTTP, HTTPS, TCP, ICMP, etc.) at either a high or low frequency rate of measurement (e.g., every 10 seconds versus every 30 seconds), during a given calendar month of the Service.

For the purposes of Oracle Cloud Infrastructure - Web Application Firewall - Non-OCI Endpoint, Endpoints Per Month is defined as the number of Origin Server configured on the Web Application Firewall.

Section 4 - Metrics and Metric Definitions

Exadata TB (Terabyte) Storage Capacity Per Month: is defined as the number of terabytes of Exadata storage reserved for Oracle Autonomous Data Warehouse or Oracle Autonomous Transaction Processing or reserved for cross-region Autonomous Data Guard staging, if applicable, during each month of the Services Period of the applicable Oracle Cloud Service.

Execution Hour: is defined as the number of execution hours used by Pipeline Operators as part of Oracle Cloud Infrastructure Data Integration. A scheduled run of a single task counts as a pipeline with a single Pipeline Operator execution. Each partial Execution Hour consumed is billed as a partial hour with a one-minute minimum. The first 30 hours of Execution Hour per tenant per month is free.

Execution Pack Per Month: is defined as up to 10,000 execution activities during each month of the Services Period, with one execution pack equaling up to 10,000 activities. An activity is any available element in the palette such as notifications, human tasks, service calls, start/end events, and gateways. An executed activity is defined as an activity that is executed at runtime when a transaction or payload is processed.

Gateway Per Hour: is defined as single state representation of one or many instances (called gateway nodes) of the gateway application component installation. A gateway is represented as a "Gateway" in the management service gateway table in the database and is shown as such in the user interface. A gateway is counted by counting the number of gateways in the "Gateways" tab in the management service user interface during a single hour. When a gateway node is registered to the management service, You have the option to register it to an existing gateway or to create a new gateway. When the last node is de-registered, You will have the option to delete the gateway and reduce the count of gateways.

Gigabyte Data Capacity: is defined as the volume of data generated, ingested, managed and analyzed from the Monitored Accounts and Monitored Apps. Capacity may include but is not limited to development, test, QA, training, pre-production, production, HA, DR or any other environments that You deem necessary to be monitored by the Company's service offering.

Gigabyte (GB) Data Capacity Per Hour: for the purposes of Oracle CASB for IaaS and Oracle CASB for Custom Apps is defined as the volume of data generated, ingested, managed and analyzed from the Monitored Accounts and Monitored Apps per hour. Capacity may include but is not limited to development, test, quality assurance (QA), training, pre-production, production, high availability (HA), disaster recovery (DR) or any other environments that You deem necessary to be monitored by Oracle's Cloud Service offering.

For the purposes of Oracle CASB for Data Protection, Data Loss Prevention Retroactive Scan, Gigabyte (GB) of Data Capacity Per Hour is defined as the volume of data scanned per hour.

Gigabyte (GB) of Data Processed: is defined as the quantity of any transfer of data to or from the Load Balancer over the internet including responses to Your client requests during a calendar month.

For the purposes of Oracle Cloud Infrastructure Network Firewall, Gigabyte (GB) of Data Processed is defined as every GB of data processed by the network firewall instance in a month.

Gigabyte (GB) of Data Processed Per Hour: is defined as the quantity of gigabytes of data processed from/to the Oracle Data Integration Platform Cloud Service (host or remote agents), which may include counting any combination of data throughput for data replication, batch data movement, data streaming or data cleansing operations. For the purposes of Oracle Cloud Infrastructure Data Integration, Gigabyte of Data Processed Per Hour is defined as the quantity of gigabyte of data input into Oracle Cloud Infrastructure Data Integration during a one hour period.

Gigabyte (GB) of Data Transferred: is defined as the quantity of gigabytes of data You transfer to/from the Oracle Cloud Service.

For the purposes of MySQL, the quantity of gigabytes of data transferred to/from the Oracle Cloud Service and for which You will be charged include:

1. Out of Service transfers, where the traffic is across different Amazon Web Services (AWS) regions or between an AWS region and internet/other cloud ;
2. In and out of Service transfers, where the traffic is through the Ingress and Egress Private Endpoints; and
3. Within the Service transfers, where the traffic is between two managed MySQL instances in different Availability Zones within an AWS region, such as data replication between source and replica MySQL instances, between primary and read-replica MySQL instances, and between the MySQL instances within a MySQL High Availability cluster.

Gigabyte of Good Traffic Per Month: is defined as the data of the HTTP response egress traffic passed through the Web Application Firewall as a reverse proxy from the origin server.

Gigabyte Log Storage Per Month: is defined as the number of GB of logs stored inside the Oracle Cloud Infrastructure Logging Cloud Service during a month of the Oracle Cloud Service. The minimum amount that will be billed is 1 MB.

Gigabyte Memory Per Hour: is defined as the number of gigabyte memory hours allocated as part of Oracle Application Container Cloud Service instance.

Gigabyte Memory Per Month: is defined as the number of gigabyte memory hours allocated as part of Oracle Application Container Cloud Service instance in a calendar month.

Gigabyte (GB) Outbound Data Transfer Per Month: is defined as the quantity during a calendar month of the Oracle Cloud Service of both the data You download directly from the Oracle Cloud Service plus the quantity of Outbound Data Transfer from the Oracle Cloud Service over the internet, including responses to Your client requests and the data You transfer between Oracle Cloud Infrastructure regions.

Gigabyte (GB) of Packaged Video Content: is defined as the number of gigabytes requested by a video player or content delivery network (CDN) service and packaged to Oracle Cloud Infrastructure Media Streams during a month.

Performance Units Per Gigabyte Per Month: is defined as per gigabyte storage performance characteristics for the Oracle Cloud Infrastructure block volume during a month of the Service. This metric must be purchased and is metered in increments of 10. You may adjust performance characteristics such as IOPS/GB, throughput/GB, and maximum IOPS for the Oracle Cloud Infrastructure block volume.

For the purposes of Oracle Cloud Infrastructure – File Storage High Performance Mount Target, Gigabyte (GB) Performance Units Per Month is defined as per gigabyte storage performance characteristics for a file system during a month of the Service. This metric is purchased and metered in units of gigabytes and is adjusted based on throughput per second, such as gigabits per second.

Gigabyte Per Hour: is defined as 1 GB of memory capacity in the server as a part of the Oracle Cloud Service.

Gigabyte Per Month: is defined as the total amount of data size in gigabytes extracted from source Oracle Enterprise Manager or Oracle Automatic Workload Repository data from Oracle Database every month. The data size measured is uncompressed data.

Gigabyte Storage Capacity Per Hour: is defined as all VM disk space calculated per hour. Volume storage is billed at 2.1 times the amount of application storage. This is done to account for snapshots, blueprints and other advanced functionality. Library storage accounts for all library VMs, blueprints and stopped VMs.

Gigabyte Storage Capacity Per Month: is defined as a gigabyte (1,073,741,824 bytes) of computer storage space used by a storage filer of the Oracle Cloud Service during a month of the service.

For the purposes of Oracle Cloud Infrastructure Database with PostgreSQL, Oracle Cloud Infrastructure Database Optimized Storage is a high-performance storage that is utilized for that service.

For the purposes of Oracle Exadata Exascale VM Filesystem Storage and Oracle Exadata Exascale Smart Database Storage are utilized for that service.

Gigabyte (GB) Storage Retrieved Per Month: is defined as a gigabyte (1073741824 bytes) of computer storage retrieved during a month of the Oracle Cloud Service.

Gibibyte Memory (GiB) Per Hour: is defined as 1 gibibyte of memory capacity in the server as a part of the Oracle Cloud Service.

Section 4 - Metrics and Metric Definitions (continued)

GPU Monitoring Unit Per Hour: GPU Monitoring Unit Per Hour is defined as the quantity of GPU Monitoring Units required per hour to monitor a specific GPU Type as defined in the GPU Monitoring Units Table below. Each hour of use will be multiplied by the applicable GPU Monitoring Units per the specific GPU Type as set forth in the GPU Monitoring Units Table, which will be used to determine the price per hour for the specific GPU Type. Each partial GPU Monitoring Unit Hour consumed will be billed as a full hour.

Refer to the table below for the GPU Monitoring Units for each type of GPU:

GPU Type	GPU Monitoring Unit Per GPU
NVIDIA H100	5
NVIDIA A100	2
NVIDIA A100	1
NVIDIA V100	2
NVIDIA P100	1

GPU Per Hour: For the purposes of Oracle Cloud Infrastructure – Compute (GPU offerings), Your usage is measured per the “GPU Per Hour” metric by calculating the number of GPU hours used. Fees are based on adding “GPU per hour” usage for each Oracle Cloud Infrastructure compute instance, from the time a compute instance is launched until it is terminated.

HeatWave Capacity Per Hour: is defined as a unit of 16 Gigabyte memory hours allocated in MySQL HeatWave.

Host CPU Core Per Hour: is defined as the total number of cores of the processors used per hour underlying the physical host, VM, or container on which the target database or host is being monitored externally. All host CPU cores are counted, including cores underlying both primary and standby databases, and cores running each instance of RAC. If multiple Oracle database targets are running on the same processors of the physical hosts, VMs or containers, then the host CPU core will only be counted once. Each partial Host CPU Core hour consumed will be billed as a full hour.

Host CPU Core Per Month: is defined as the total number of cores of the processors used per month underlying the physical host, VM, or container on which the target database or host is being monitored externally. All host CPU cores are counted, including cores underlying both primary and standby databases, and cores running each instance of RAC. If multiple Oracle database targets are running on the same processors of the physical hosts, VMs or containers, then the host CPU core will only be counted once.

Hosted Connection: is defined as a unique connection used to build integrations between applications using the Oracle Integration Cloud Service or Oracle Integration Cloud Service for CX. A Connection is counted per unique application, data source, third party software, Oracle software, Web Service or REST end point to which the Oracle Integration Cloud Service is connected. Web Services that use the same WSDL URL and credential are counted as one Connection.

Hosted Environment: is the combination of systems and supporting resources to which Oracle grants you access as part of the Oracle Cloud Services ordered by you, that is (i) configured for the Oracle Programs operating on it and for specific uses as part of the Oracle Public Cloud Services, and (ii) used by Oracle to perform the Oracle Cloud Services. The Hosted Environment consists of the Production Environment, and any non-Production Environment(s), as referenced in the applicable Ordering Document and services policies.

Hosted Environment Per Hour: is defined as the combination of systems and supporting resources provided as part of the Oracle Data Management Cloud Services (the Hosted Environment), the use of which is measured on a per hour basis. Each partial Hosted Environment hour consumed will be billed as a partial hour. The included amount of the following items vary per service and selected shape, and are as specified in the Service Descriptions for the applicable Cloud Service: minimum Services Period, base number (zero or more) of OCPU enabled, optional maximum OCPU capacity and local storage capacity.

Please note that:

For High IO & Dense IO capacity: Each Hosted Environment has 2 OCPUs enabled. You may scale up to 36 OCPUs in increments of 2.

For 2-node RAC: Each Hosted Environment has 4 OCPUs enabled. You may scale up to 72 OCPUs in increments of 4.

Hosted Environment Per Month: is the combination of systems and supporting resources to which Oracle grants You access as part of the Oracle Cloud Services ordered by You, that is (i) configured for the Oracle Programs operating on it and for specific uses as part of the Oracle Public Cloud Services, and (ii) used by Oracle to perform the Oracle Cloud Services. The hosted environment consists of the production environment, and any non-production environment(s), as referenced in the applicable ordering document.

For the purposes of Oracle NoSQL Database Cloud Service

o You are provided a minimum of 420,000 read units per month

o You are provided a minimum of 280,000 write units per month

o You are provided a minimum of 17,500 GB storage per month

Hosted Named Agent: is defined as the data collectors on the target Java Virtual Machine (“JVM”) and there is one Hosted Named Agent deployed per JVM. Hosted Named Agents collect JVM monitoring data related to JVM threads, stacks, requests, methods, heap and CPU usage.

Hosted Named User: is defined as an individual authorized by you to access the hosted service, regardless of whether the individual is actively accessing the hosted service at any given time.

Hosted Named User Per Hour: is defined as an individual authorized by You to access the hosted Cloud Service in an hour, regardless of whether the individual is actively accessing the hosted Cloud Service at any given time.

Hosted Named User Per Month: is defined as an individual authorized by you to access the hosted service in a calendar month, regardless of whether the individual is actively accessing the hosted service at any given time.

Hosted Node: is defined as a high-performance, Infiniband-enabled server for extending Hadoop clusters on the Oracle Big Data Cloud Service.

HSM Partition Per Hour: is defined as one single-tenant Hardware Security Module (HSM) partition used on an Oracle Cloud Infrastructure Cloud Service where that Service is measured and billed on an hourly basis.

Inferencing Unit Hour: is an hour an inferencing unit is dedicated for running a custom model. Any partial inferencing unit hours will be charged as a full hour. Inference units provide a throughput equivalent to 500 characters per second.

For the purposes of Oracle Cloud Infrastructure Language Cloud Service, an inference unit running a custom model provides a throughput equivalent to 500 characters per second and an inference unit running a healthcare model provides a throughput equivalent to 10,000 characters per second.

Instance Per Hour: is defined by each Cloud Service as follows:

For the purposes of Oracle Autonomous Data Warehouse – Dedicated – Developer, Oracle Autonomous Transaction Processing - Dedicated – Developer, Oracle Autonomous Data Warehouse – Exadata Cloud@Customer – Developer and Oracle Autonomous Transaction Processing – Exadata Cloud@Customer – Developer, an instance is defined as a single, provisioned Autonomous Database. Autonomous Database instances are billed per hour, with partial hours rounded up to the nearest whole hour. Every hour the Autonomous Database instance is running, it is counted as an instance per hour.

For the purposes of Oracle ZFS Storage – High Availability, an instance is defined as a bare metal (BM) or virtual machine (VM) instance in which the ZFS Storage Market Place image is deployed. Every hour the instance is running, it is counted as an instance per hour.

For the purposes of Oracle Cloud Infrastructure - Web Application Firewall (“WAF”), an instance is defined as an active WAF policy attached to a web-application or a load balancer instance. Every hour the policy and the attachment are in active status is counted as an instance hour.

For the purposes of Oracle Cloud Infrastructure Network Firewall, every hour the network firewall instance is in active status is counted as an instance per hour.

Instance Per Month: is defined as a single deployment of an Oracle Cloud Service provisioned by You.

Interactions Per Month: is defined as a request initiated from client browser delivering up to 100,000 of data in a calendar month. If a request exceeds 100,000 it will account for multiple interactions.

Section 4 - Metrics and Metric Definitions (continued)

Key Version Per Month: is defined as one key version in a single-tenant accessible encryption key storage vault used on an Oracle Cloud Infrastructure Cloud Service where that Service is measured and billed on a monthly basis.

Load Balancer Hour: is the number of hours from when a given Load Balancer is launched until it is terminated. Each partial server-hour consumed will be billed as a full hour.

Logging Analytics Storage Unit: is defined as a gigabyte (1,073,741,824 bytes) of logs stored inside Oracle Cloud Infrastructure Logging Analytics during a month of the Oracle Cloud Service. One Logging Analytics Storage Unit equates to 300 gigabytes of Log Storage per month. The minimum billing threshold is 1 Logging Analytics Storage Unit.

Logging Analytics Storage Unit Per Hour: is defined as 300 GB of logs stored during an hour of the service. The units of storage are evaluated hourly.

Logging Analytics Storage Unit Per Month: is defined as 300 gigabytes of logs stored during a month of the Oracle Cloud Service. The minimum amount that will be billed is 1 Logging Analytics Storage Unit.

Mbps Per Hour: is the bandwidth of the load balancer represented in Mbps per hour. This metric is only applicable to the 10 Mbps Load Balancer paid version and has to be configured at 10 Mbps per hour.

Memory Gigabyte Per Hour: is defined as 1 gigabyte GB of memory capacity in the server as a part of the Oracle Cloud Service. A gigabyte is defined as a unit of information equal to one billion (10⁹).

Migration Hour: is defined as the amount of time that a migration is running, where "running" is defined as a migration job being in a state of "in progress" or in a state of "waiting". Partial Migration Hours consumed are billed as partial hours with a one-minute minimum.

Million Datapoints: is defined as a count in the millions of the Oracle Cloud Infrastructure Monitoring Datapoints either ingested or retrieved for a Monitoring Metric.

Million Delivery Operations: is defined as the number of delivery operations in the millions performed by the Oracle Cloud Infrastructure Notifications Service, including retries to deliver messages to HTTPS endpoints. Each 8KB portion of delivered data is billed as 1 operation.

Minute of Output Media Content: is defined as the length of output media content that is processed by Oracle Cloud Infrastructure Media Flow Cloud Service during a one-minute period. Each minute will be billed in 6 second increments.

Monitored Account: is the account that You established with Your IaaS or PaaS provider, that includes (1) the Your email address and password, (2) the control of resources available or created within the account, and (3) payment for the IaaS or PaaS activity related to those resources. You may monitor the Monitored Account by use of this Oracle CASB Cloud Service. The IaaS or PaaS account has permission to do anything and everything with all the account resources.

Monitored Account Per Hour: is defined as the account that You established with Your IaaS or PaaS provider that includes (1) the Your email address and password, (2) the control of resources available or created within the account, and (3) payment for the IaaS or PaaS activity related to those resources. Each Active IaaS/PaaS Monitored Account by use of the applicable Oracle Cloud Service. Active means account is configured and activated in Oracle CASB Cloud Service. For the purposes of Oracle CASB Cloud Service, an Oracle Cloud Infrastructure Compartment is considered to be equivalent to an account.

Monitored App: is defined as any custom or tailor-made application or workload that is specifically developed and deployed by You on a Cloud-based or IaaS infrastructure, either for internal or external use, that You monitor with this Oracle CASB Cloud Service. A Monitored App may include but is not limited to development, test, quality assurance (QA), training, pre-production, high availability (HA), disaster recovery (DR) or any other environments that You deem necessary to be monitored by this Oracle Cloud Service.

Monitored App Per Hour: is defined as any custom or tailor-made application or workload that is specifically developed and deployed by You on a PaaS or IaaS based infrastructure, either for internal or external use, that is configured and activated and that You monitor each hour with the applicable Oracle Cloud Service. A Monitored App may include but is not limited to development, test, quality assurance (QA), training, pre-production, high availability (HA), disaster recovery (DR) or other environments that You monitor with this Oracle CASB Cloud Service

Monitored Service User: is defined as a user account in Your SaaS applications, which You are authorized to monitor each hour for each service with the Oracle CASB Service. Users account may include individual user accounts as well as accounts shared by multiple users of the monitored SaaS applications and are not limited to the employees, customers, partners, consultants, contractors and agents of You, and Your customers.

Monitored Service User Per Hour: is defined as a user in Your SaaS applications, who You are authorized to monitor each hour for each service with the Oracle CASB Service. User accounts may include individual user accounts as well as accounts shared by multiple users of the monitored SaaS application and are not limited to the employees, customers, partners, consultants, contractors and agents of You, and Your customers

Node Per Hour: is defined as the number of node hours used as part of the Oracle Cloud Service. A node is a predefined combination of OCPU's (or vCPUs) and memory based on the shape. Each partial node hour consumed is billed as a partial hour, with a one minute minimum.

For the purposes of Oracle Cloud Infrastructure Search Service with OpenSearch – Node – Metered, a node is defined as the number of data node instances that can be part of a cluster system in one hour.

For the purposes of Oracle Cloud Infrastructure Search Service with OpenSearch, a data node instance is defined as the number of Compute instances with an instance type of data node that can be part of a clustered system in one hour. A customer can have two data nodes within its cluster without any hourly metering. Only any additional data nodes after the second data node will be charged the Oracle Cloud Infrastructure Search Service with OpenSearch HA rate. For example, a two-data node cluster will not be metered. If a third data node is added, there would be a single data node per hour charge metered for the third data node. If a fourth data node is added, then two data node per hour charges will be incurred.

For the purposes of Oracle Cloud Guard Workload Protection, a node instance is the number of Compute instances that are monitored by the workload protection agents in one hour.

For the purposes of Oracle Cloud VMware Solution – a node is predefined combination of OCPU's (or vCPUs), memory and local NVMe storage where applicable based on the shape.

NVMe Terabyte (TB) Per Hour: is defined as 1 TB of NVMe storage capacity in the server as a part of the Oracle Cloud Service, where a TB is defined as 1000 gigabytes.

Section 4 - Metrics and Metric Definitions (continued)

OCPU Per Hour: is defined as the number of Oracle Compute Unit (OCPU) hours used as part of the Oracle Cloud Service. An OCPU provides CPU capacity equivalent of one physical core of a processor with hyper-threading enabled. Each OCPU corresponds to two hardware execution threads, known as vCPUs. Each OCPU has a pre-defined amount of memory. Each partial OCPU Hour consumed will be billed as a full hour subject to the following exceptions.

- For the purposes of Oracle Cloud Infrastructure - Compute - Standard - A1, each OCPU is limited to providing CPU capacity equivalent to one physical core of a processor and corresponds to a single hardware execution thread or vCPU.
- For the purposes of Oracle Cloud Infrastructure - Compute - Standard – A2, each OCPU is limited to providing CPU capacity equivalent to two physical core of a processor or vCPU.
- For the purposes of Oracle Base Database Service on ARM, each OCPU is limited to providing CPU capacity equivalent to one physical core of a processor and corresponds to a single hardware execution thread or vCPU.
- For the purposes of Oracle Base Database Service on ARM, each OCPU is limited to providing CPU capacity equivalent to one physical core of a processor and corresponds to a single hardware execution thread or vCPU.
- For the purposes of Oracle Cloud Infrastructure - Compute - Standard - A1; Oracle Cloud Infrastructure - Compute - Standard - E4; Oracle Cloud Infrastructure - Compute - Standard - E3; and Oracle Cloud Infrastructure - Compute - Optimized - X9, all are available with flexible memory in Virtual Machine (VM) environments.
- For the purposes of Oracle Compute Cloud@Customer - Compute - Standard - E5, it is available with flexible memory in Virtual Machine (VM) environments.
- For the purposes of Oracle Cloud Infrastructure Database with PostgreSQL, an OCPU is defined as each OCPU utilized in the Oracle Cloud Infrastructure Database with PostgreSQL service.
- For Oracle Compute Cloud@Customer - Compute - Standard - E5 virtual machine instances, partial OCPU and memory hours consumed are billed as partial hours with a one-minute minimum.
- For the following Services, partial OCPUs hours consumed are billed per second with a one minute minimum:
 - Oracle Autonomous Data Warehouse
 - Oracle Autonomous Transaction Processing
 - Oracle Autonomous Data Warehouse - Dedicated
 - Oracle Autonomous Transaction Processing - Dedicated
 - Oracle Exadata Cloud@Customer - Autonomous Data Warehouse
 - Oracle Exadata Cloud@Customer - Autonomous Transaction Processing
- For the following Services, partial OCPUs hours consumed are billed as partial hours with a one minute minimum:
 - Oracle APEX Application Development
 - Oracle Autonomous JSON Database
 - Oracle Cloud Infrastructure – GoldenGate
 - Oracle Base Database Service
 - Oracle Exadata Database Service on Dedicated Infrastructure
 - Oracle Gen 2 Exadata Cloud@Customer
 - Compute Virtual Machine instances
 - Windows OS images
 - Compute Bare Metal instances
 - Oracle Platform Services hosted in Oracle Cloud Infrastructure. The full list of these services is available here: <https://docs.cloud.oracle.com/en-us/iaas/Content/General/Reference/PaaSPrereqs.htm#supported>
- For the purposes of Microsoft SQL server, partial OCPU hours consumed are billed as partial hours with a 744-hour minimum.
- For the purposes of the Oracle WebCenter Portal Cloud Service, only the Oracle Java Cloud Service OCPUs running the Oracle WebCenter Portal Cloud Service instance must be counted. The Oracle WebCenter Portal Cloud Service requires a minimum number of one (1) OCPU and requires high memory virtual machines.
- For the purposes of the Oracle Data Integrator Cloud Service, only the OCPUs running the Oracle Data Integrator Cloud Service must be counted. One (1) OCPU gives You up to one (1) Connection; more Connections require more OCPUs. A Connection is defined as a unique connection used to build integrations between applications or databases using the Oracle Data Integrator Cloud Service. A Connection is counted per unique application, data source, third party software, Oracle software, Web Service or REST endpoint to which the Oracle Data Integrator Cloud Service is connected. Applications, databases or Web Services that use the same url and credential are counted as one Connection. Files hosted on a file system do not count as a Connection.
- For the purposes of the Oracle Integration Cloud Service - Standard, and the Oracle Integration Cloud Service - Enterprise, each Cloud Service tracks OCPUs that are in running status on an hourly basis.
- For the purposes of the Oracle WebLogic Enterprise Edition for Oracle Cloud Infrastructure Kubernetes Engine - Enhanced Cluster and the Oracle WebLogic Suite for Oracle Oracle Cloud Infrastructure Kubernetes Engine - Enhanced Cluster, all the OCPUs running in the WebLogic node pool must be counted.
- For the purposes of the Oracle Cloud Infrastructure Ops Insights for Oracle Autonomous Database Service and Oracle Cloud Infrastructure Ops Insights for Oracle Cloud Databases, OCPU Per Hour is defined as the total number of OCPU hours enabled for target database monitoring as part of the Service.

Section 4 - Metrics and Metric Definitions (continued)

OCPU Per Month: is defined as the number of Oracle Compute Unit (OCPU) hours used as part of the Oracle Analytics Cloud Service in a calendar month. An OCPU provides CPU capacity equivalent to one physical core of an Intel Xeon processor with hyper-threading enabled. Each OCPU corresponds to two hardware execution threads, known as vCPUs.

One Million IO Requests Per Month: is defined as the maximum of one million IO requests during a calendar month of the Oracle Cloud Service of the type of Block Storage IO Requests You use in the Oracle Cloud Service.

Partition Hour: is defined as the number of Partition hours used as part of the Oracle Cloud Service. A Partition provides the capacity equivalent of 1 MB/s of data ingress, 2 MB/s of data egress and 1000 PUT operations per second.

Performance Units Per Gigabyte Per Month: is defined as per gigabyte storage performance characteristics for the Oracle Cloud Infrastructure block volume during a month of the Service. This metric must be purchased and is metered in increments of 10. You may adjust performance characteristics such as IOPS/GB, throughput/GB, and maximum IOPS for the Oracle Cloud Infrastructure block volume.

Port Hour: is defined as the number of port-hours consumed for each port configured.

Processed Video Minute: Processed Video Minute refers to the duration of a video, in minutes, that is submitted as input to the service (API call) for each requested video analysis feature. Video analysis features include Label Detection, Text Detection, Object Detection, Face Detection and Object Tracking. Usage is billed in one-minute increments, with any partial minute rounded up and charged as a full minute.

Processor: is defined in the Definitions and License Metrics section of the Oracle License Definitions and Rules which can be found on oracle.com/contracts.

Ravello Compute Hour: is defined as the number of compute hours used as part of the Oracle Ravello Cloud Service. Ravello Compute Hour price is based on the size of the service (i.e., whether R1 or R2), the minimum application price (the "M"), the networking tier (whether *Advanced* or *Enterprise*), and the deployment mode (whether *Cost Optimization* or *Performance Optimization*).

R1: means those Oracle Ravello Cloud Services - which provide CPU and memory capacity equivalent to 2 vCPUs and 4 GB RAM.

R2: means those Oracle Ravello Cloud Services - which provide CPU and memory capacity equivalent to 2 vCPUs and 8 GB RAM.

M: means the minimum fees applicable to the Oracle Ravello Cloud Services - per application Ravello Compute Hour of usage. The minimum fee applies if the fees for the number of R1/R2 compute hours used as part of the Oracle Ravello Cloud Service - in an hour would otherwise fall below this minimum.

Read Unit Per Month: is defined as the throughput of up to one kilobyte (KB) of data per second for an eventually consistent read operation (i.e., where the data returned may not be the most recently written data to the database; if no new updates are made to the data, eventually all accesses to that data will return the latest updated value) over a one-month period, or approximately two million six hundred thousand (2.6 million) reads. (Each month is deemed to have seven hundred forty-four (744) hours or approximately two million six hundred thousand (2.6 million) seconds. So over a one-month period, one (1) read unit will provide You with approximately 2.6 million reads.) To achieve the throughput of up to one kilobyte (KB) of data per second for an absolute consistent read operation (i.e., where the data returned is expected to be the most recently written data to the database), the equivalent of two Read Units Per Month need to be provisioned.

Recipe Jobs Per Hour: is defined as the total number of recipe jobs launched within an hour window for all users within an Oracle Self Service Integration Cloud Service instance. A recipe job for an active recipe is launched to process its associated data when the recipe's trigger event and condition are met.

Redis Memory Gigabyte Per Hour: is a management fee charged for offering the managed service that is tied to the amount of memory deployed per node. Memory is defined as the number of gigabytes of memory capacity utilized per hour per node in the Oracle Cloud Infrastructure Caching with Redis Cloud Service. As a note, this management fee also accounts for all underlying infrastructure deployed.

Request: is defined as the number of requests made to the Oracle Cloud Service. A request is defined as an API call from a mobile app or one round trip interaction (request to a bot and a response from that bot) or a push initiated from the Oracle Cloud Service.

For the purposes of the Oracle Digital Assistant Cloud Service, a request is counted as follows: (a) any round-trip conversation with the chatbot skill, (b) authentication and authorization (login); (c) invocation of an instant app or WebView component; (d) use of the tester in the Bots admin tool; (e) push notifications from the skill ; (f) drill down from the Bot Insights home page to Insight Details; and (g) calling the embedded custom component code.

For the purposes of Oracle Cloud Infrastructure - Cloud Guard Workload Protection, a request is equivalent to each query of Workload Protection run per each instance for a given hour.

Request Per Hour: is defined as the number of requests made to the Oracle Cloud Service in an hour. A request is defined as an API call from a mobile app or one round trip interaction (request to a bot and a response from that bot) or a push initiated from the Oracle Cloud Service.

Resource Possession Per Day: is defined as the number of days in which You have possession of a Resource from the Oracle Cloud Infrastructure – Oracle Roving Edge Infrastructure Service. Resource is defined as a Roving Edge Ultra, ruggedized Roving Edge Device, standard Roving Edge Device, or Roving Edge Cluster Kit. Possession means You or someone that has been designated as Your representative (e.g., a common carrier, where You are retaining a representative to deliver the Resource to You) has physically taken control of the Resource. Possession begins at midnight UTC on the day after delivery, where the delivery day is the earlier of: (a) the day You or Your representative picks up the Resource from a designated Oracle U.S. facility or (b) the day You receive the Resource (where You have requested that Oracle ship the Resource to You at Your cost), and ends on the day it is returned to and officially received at the designated Oracle U.S. facility.

Resource Possession Per Month: is defined as the number of months in which You have a Roving Edge Station, Roving Edge Device or Roving Edge Cluster Kit (each a "Resource") from the Oracle Cloud Infrastructure – Oracle Roving Edge Infrastructure Service in Your possession. Possession begins when You receive the Resource (where You have requested that Oracle ship the Resource to You at Oracle cost, or where You or Your representative (which can mean a common carrier) picks up the Resource from a designated Oracle U.S. facility) and it is determined operational by Oracle. Possession ends on the last day of the Services Period as set forth in Your order or as further described below.

Static IP Per Hour: is defined as the number of Static IP hours used as part of the Oracle Compute Cloud Service. These hours could include additional static IPs associated with a running instance or static IPs that are not associated with any running instance.

Storage Pack: is defined as one hundred (100) gigabytes of file storage across all users per tenant.

Target Database Per Month: is defined as a unique database target (either on-premises or running in a virtual machine on infrastructure as a service) registered to be managed by the Oracle Cloud service during a month.

TB of Storage Capacity: is defined as a terabyte of computer storage space used by a storage filer equal to one trillion bytes through the Cloud Service.

Terabyte Storage Capacity Per Month: is defined as a terabyte (1,024 gigabytes) of computer storage space used by a storage filer of the Oracle Cloud Service during a month of the Service.

Training Hour: is defined as the number of hours spent training a custom model. Any partial training hour will be charged as a full hour.

For the purposes of Oracle Cloud Infrastructure - Vision, users have the option to either define a set number of hours (i.e., 3) or choose a "recommended" training duration, which can be up to 24 hours.

For the purposes of Oracle Cloud Infrastructure - Language - Custom Training, a training hour is the equivalent of training on an 8 core CPU machine.

Transcription Hour: is defined as the cost of transcribing one hour of audio into text.

Token: is defined as a JSON Web Token (JWT) that is issued by the Cloud Service and used to securely transmit information between parties during a one hour period.

Section 4 - Metrics and Metric Definitions (continued)

Universal Credits Consumption: is defined as a fixed percentage of the total Universal Credits consumed each day for the entire tenancy with a minimum charge per month. At the end of each month, if the fixed percentage of the consumption is less than monthly minimum, the remainder of the monthly minimum, prorated for the portion of the month the service is activated, will be charged.

User Per Month: is defined as an individual configured to access the hosted service during the billing period, regardless of whether the individual is actively accessing the hosted service at any given time. You will be billed at the maximum configured user count during each billing period, even if users are removed from the hosted service during this period.

For purposes of the Oracle Container Pipelines Cloud Service, users are represented in container pipelines as members of an organization. For each billed entity there must be one parent organization under which all of its users and sub-organizations are managed.

For the purposes of Oracle Analytics Cloud, You will be charged immediately on creation of the instance for all users that are configured. The minimum number of users for which You will be charged is 10.

For the purposes of Oracle Content Management - Sales Accelerator Suite, You will be charged immediately on creation of the instance for all users that are configured. You will be charged for a minimum number of 25 users. Moreover, with respect to any new users added or existing users removed (subject to the minimum user number) in between the billing months, or if the Cloud Service started after the start of the billing month, You will be charged for those users at a pro-rated rate for the number of days left in a billing month. Additionally, one Sales Accelerator Suite User with a Content Creator user role is equivalent to one User Per Month and each five Sales Accelerator Suite Users with the Standard Application user role is equivalent to one User Per Month.

vCPU Per Hour: is defined as the number of compute hours used as part of the Cloud Service. It provides CPU capacity equivalent of one hardware execution threads, known as vCPUs. The vCPU Per Hour price is based on the deployment model.

For Cloud Services on Oracle Cloud Infrastructure (whether standard, enterprise or metal).

Standard means those Cloud Services which provide CPU capacity equivalent to 100% vCPUs overcommit.

Enterprise means those Cloud Services which provide CPU capacity with no vCPUs overcommit.

Metal means those Cloud Services which provide dedicated, for your application, bare metal servers allocated in 36 vCPU units with no vCPUs overcommit.

For non-elastic IP addresses, fees are based on the time period the virtual machines are actually running. For elastic IP addresses, fees are based on the entire time period that the IP is allocated for Your use.

Video Pack (500 Videos - 500 Gigabytes (GB)) Per Month: is defined as up to 500 videos consuming up to 500 GB of storage per month.

Virtualized-Gigabyte Per Month: is defined as the sum of the storage space used from the following: equivalent to weekly full backups, daily incremental backups, and archived redo log backups of the Oracle Database instances during a calendar month.

Virtual Machine IP Per Hour: is defined as the number of Virtual Machine IP hours allocated or used as part of the Oracle Ravello Cloud Service. These hours could include elastic and non-elastic IP addresses. For non-elastic IP addresses, fees are based on the time period the VMs are actually running. For elastic IP addresses, fees are based on the entire time period that the IP is allocated for Your use.

Virtual Node Per Hour: is defined as the number of virtual node hours used as part of the Oracle Container Engine for Kubernetes Cloud Service. A virtual node provides the abstraction of a regular worker node to Kubernetes. It is billed per second and measured as the number of virtual nodes in Oracle Engine for Kubernetes clusters for a duration measured in seconds, rounded up to the nearest whole number with minimum of one minute.

Virtual Private Vault Per Hour: is defined as 1 single-tenant accessible encryption key storage vault used on Oracle Cloud Infrastructure (OCI) that is measured on an hourly basis and billed on a monthly basis.

Workspace Usage Per Hour: Is defined as the workspace instance provided as part of Oracle Cloud Infrastructure Data Integration, the use of which is measured on a per hour basis.

Workforce User Per Month: is defined as an identity that is configured to access the Service either through a user interface or through programmatic configuration during the billing period, regardless of whether the identity is actively accessing the Service at any given time.

For the purposes of Oracle Access Governance, identities that could access the Service through the Service user interface or through external user interfaces to manage their own access or the accesses of other identities shall be deemed to be Workforce Users.

Identities that include, but are not limited to, employees, temporary workers, outsourcers, and contractors whose birth right and regular accesses are managed through access controls of Oracle Access Governance shall be deemed to be Workforce Users.

You will be billed for Workforce Users marked as "Active" in Oracle Access Governance on a monthly basis for the configured Workforce User count metered every hour.

Write Unit Per Month: is defined as the throughput of up to one kilobyte (KB) of data per second for a write operation over a one month period, or approximately two million six hundred thousand (2.6 million) writes. (Each month is deemed to have seven hundred forty-four (744) hours or approximately two million six hundred thousand (2.6 million) seconds. So over a one-month period, one (1) write unit will provide You with approximately 2.6 million writes.)

Section 4 - Metrics and Metric Definitions (continued)

1 Managed Resource Per Month: is defined as a compute or database instance (a node) that is part of a fleet (group of resources) that was created by You and that is managed by the Service to ensure continuous compliance.

1 SMS Message Sent: is defined as each Short Message Service (SMS) message (counted on a per recipient basis) that is accepted by the Oracle Cloud Infrastructure Notifications Service to deliver during the applicable billing period. A single Oracle Cloud Infrastructure Notifications Service topic with 10 different recipients would therefore be counted as 10 SMS messages (e.g., 140,000 SMS Messages accepted, each with 2 different recipients would be charged as 280,000 SMS messages). The cost of each SMS message depends on the destination country zone of the recipient (e.g., a message sent to a recipient in the United States would be charged at the per SMS message rate of country zone 1 while a message sent to a recipient in Canada would be charged at the per SMS message rate of country zone 2). The list of countries within a specific country zone may change periodically and the latest list may always be found on the Oracle Cloud Infrastructure Notifications Service pricing page.

10 Concurrent Connections: is defined as a maximum of 10 Concurrent Messaging Connections, of which You can send and receive up to a total of five million (5,000,000) messages per month. Each Concurrent Messaging Connection can send and receive up to a total of five million (5,000,000) messages per month. Each Message Push Listener may each use exclusively one Messaging Connection. The number of Message Push Listeners within a Service instance may not exceed the number of Concurrent Messaging Connections within that instance.

10 Monitored Resources Per Hour: is defined as 10 monitored resources per hour, where a monitored resource is part of the technology stack, such as an application (e.g., Oracle E-Business Suite (EBS) and EBS components such as Concurrent Processing), a database (e.g., Oracle database), or an application server (e.g., Oracle WebLogic Server).

For the purposes of billing, each instance of a monitored resource type is counted as one resource. For clustered resources, the cluster - including all individual members - is collectively counted as one resource (i.e., individual members of the cluster are not counted). For example, an Oracle WebLogic Cluster containing 2 Oracle WebLogic Servers would be counted as one monitored resource. Monitored resources will be charged in blocks of 10 Monitored Resources Per Hour; each partial 10 Monitored Resources Per Hour will be charged as a full 10 Monitored Resources Per Hour.

10 Monitor Runs Per Hour: is defined as 10 monitor runs where a monitor run is an execution of one monitor (scripted monitor, page load monitor, REST API monitor) from one Advantage point location. Usage of an external Vantage Point location to execute a monitor; each execution is counted as 3 monitor runs.

100 Entities Per Hour: is defined as 100 entities where each Entity refers to a technical asset being managed or monitored, such as a server, database, application that resides either in the cloud and/or on-premise during a one hour period. Examples of entities include, but are not limited to: Host, Docker Container, SQL Server instance, MySQL instance, Oracle Database instance, WebLogic Server, Tomcat, Oracle Traffic Director Instance, custom created entity, etc.

You have the ability to extend existing pre-defined Entities and create Your own entirely custom Entities. In extending pre-defined Entities, a maximum of five (5) additional numeric time series is allowed. For custom Entities, a total of 40 numeric time series are allowed (a numeric time series is a measurement of time associated with an Entity, such as response time, transaction per second, CPU %, etc.).

For the purposes of counting certain entity types, a conversion factor will be applied:

- One database Oracle Compute Unit (OCPU) will count as 1 Entities.
- One database processor will count as 2 Entities.
- One Application Performance Monitoring Agent (an "APM Agent") will count as 15 Entities.

An APM Agent is defined as the data collector on a target application server being monitored, whether in the cloud or on-premise. Examples of target application servers include but are not limited to a single JVM, a single .NET Application Domain, or a single host running Node.JS.

100 Monitored Objects: is defined as 100 Monitored Objects where each object refers to a technical asset being monitored, such as a server, database, application that resides either in the cloud and/or on-premise. Examples of monitored objects include, but are not limited to: Host, Docker Container, SQL Server instance, MySQL instance, Oracle Database instance, WebLogic Server, Tomcat, Oracle Traffic Director instance, etc.

For the purposes of Oracle Infrastructure Monitoring Cloud Service, customers have the ability to extend existing pre-defined monitored objects and create their own entirely custom monitored objects. In extending pre-defined monitored objects, a maximum of five (5) additional numeric time series is allowed and for custom monitored objects, a total of 40 numeric time series is allowed (a numeric time series is a measurement of time associated with a monitored object, such as response time, transaction per second, CPU %, etc.).

250 Video Assets Per Month: is defined as 250 video assets per month, where one (1) video asset is one (1) advanced video (published or not published) stored in an Oracle Content Management asset repository, or 20 files of any type stored in the Oracle Content Management advanced video project workspace. An advanced video project workspace is used for storing user-contributed draft files.

If the total number of video assets utilized during a month exceeds the number of video assets that are entitled per 250 Video Assets per Month, an additional 250 Video Assets per Month will be charged. Only the current top level revision of any given video asset is counted toward the total number of video assets.

If an Oracle Content Management instance has been provisioned and designated as a non-primary instance, only a single quantity of 250 Video Assets Per Month will be charged regardless of the total number of video assets being replicated. A non-primary instance can be used for disaster recovery, development, staging or quality assurance activities.

300 Gigabytes Per Hour: is defined as 300 gigabytes of total indexed size of stored log data.

500 Transactions Per Hour: is defined as 500 blockchain transactions attempted in an Oracle Blockchain Platform Cloud Service instance in an hour. A blockchain transaction is defined as a ledger query, an attempted endorsement transaction (irrespective of the outcome of the transaction – success or failure), or an attempted commit transaction (irrespective of the outcome of the transaction – success or failure) for each peer in the Oracle Autonomous Blockchain Cloud Service instance. A peer represents an entity (organization registered on the blockchain) executing blockchain transactions. One entity can have multiple peers. You specify the number of peers at the time of provisioning and You can dynamically start additional peers.

1,000 Daily Visitor Sessions: is defined as 1000 Daily Visitor Sessions where a Daily Visitor Session is defined as a unique individual who accesses the service during a 24 hour period using a specific channel (e.g. web site, mobile app) and is identified through the use of cookie, device id, IP or session id. Access across multiple channels counts for multiple visitor sessions.

1,000 Emails Sent: is defined as 1,000 emails that are accepted by the Email Delivery Cloud Service to receive and parse or to deliver to the end recipient in the billing period, where an email is defined as an electronic mail message, counted on a per recipient basis. A single email with 10 different recipients would be counted as 10 emails (e.g., 140,000 emails accepted, each with 2 different recipients would be charged 280 x \$0.085= \$23.80). For the purposes of Oracle Cloud Infrastructure - Notifications - Email Delivery Cloud Service, each 64 kilobyte (KB) portion of delivered data is billed as 1 email. For the purposes of Oracle Cloud Infrastructure - Notifications - Email Delivery Cloud Service, each 2MB portion of delivered data is billed as 1 email. The maximum message size of 10MB will be billed as 5 emails (e.g., 140,000 emails accepted at 10MB size, each with 2 different recipients would be charged 280 x \$0.085 x 5= \$119.00).

1,000 Events Per Hour: is defined as 1,000 events where an event is one distributed tracing span. A distributed tracing span describes the time it takes to complete an individual unit of work in the distributed system. Each distributed tracing span encapsulates an operation name, context information, a start and finish timestamp, a set of key value tags that can be used for annotation and key value logs that can be used to capture messages and debug information related to the span.

1,000 Messages: is defined as 1,000 Messages per Month, where one Message is a packet of data sent between (to or from) a Device and Oracle Internet of Things Cloud Service during a calendar month.

1,000 Requests Per Month: is defined as maximum of 1,000 Requests per Month, of the type of REST API Requests You use in the Oracle Cloud Service, including PUT, HEAD, POST, COPY, LIST, DELETE and GET.

1,000 Transactions: is defined for the purposes of Oracle Cloud Infrastructure - AI Services – Language as the number of 1,000-characters within a document that is provided as an input to the service (API call). For example, if a customer called this Cloud Service with a single tweet (up to 280 characters long), that would be counted as a single Transaction. If a customer called this Cloud Service with a document that is 3 pages long and totaling 5,000 characters, that would be counted as 5 Transactions. If the document totaled 5,001 characters, it would be counted as 6 Transactions.

For the purposes of Oracle Cloud Infrastructure Document Understanding Cloud Services, transactions are defined as the number of operations per page that are provided as inputs to the Oracle Cloud Service (API call) and consumed in total at service end points, monitored hourly through the month, with each operation equal to one transaction.

Section 4 - Metrics and Metric Definitions (continued)

5,000 Assets Per Month: is defined as 5,000 Assets Per Month, where one (1) asset is one (1) item of any type (published or not published) stored in the Oracle Content and Experience Cloud Service asset repository. An asset stored in the asset repository can be either a file based asset (e.g., a document, an image, a video) or a content item and a content item is a block of information created using a content type. Every twenty (20) files of any type stored in the Oracle Content and Experience documents file repository counts as one (1) asset.

If the number total number of assets utilized during a month exceeds the number of assets that are entitled per 5,000 Assets Per Month an additional 5,000 Assets Per Month will be charged.

Only the current top level revision of any given file or asset is counted toward the assets counts.

If an Oracle Content Management instance has been provisioned and designated as a non-primary instance, only a single quantity of 5,000 Assets Per Month will be charged regardless of the total number of assets being replicated. A non-primary instance can be used for development, staging, QA or disaster recovery.

Each provisioned Oracle Content Management instance is charged a minimum of 5,000 Assets Per Month (i.e., the minimum charge is one 5,000 Assets pack per instance). You will be charged for the total count of 5,000 Assets packs per month used across all provisioned Oracle Content Management instances (primary and non-primary) within Your Cloud Services Account.

5,000 Messages Per Hour: is defined as the number of 5,000 message quantities used as part of the Oracle Cloud Service. A message is defined as up to 50 kilobytes (KB) of in-and-out transmission from/to the Oracle Cloud Service. Any messages over 50KB in size must be counted as multiple messages, with each 50KB or portion thereof counting as equivalent to one message (e.g., 210KB would be counted as 5 messages).

10,000 API Calls per Month: is defined as 10,000 of any API call or notification consumed by any application built on the Oracle Mobile Cloud Service during a month of the service.

10,000 Audit Records Per Target Per Month: is defined as 10,000 database audit records collected from a specific database target by the Oracle Cloud Service during a month.

10,000 Gigabyte Memory-Seconds: is defined as 10,000 gigabyte memory-seconds, where a gigabyte memory-second is defined as the amount of RAM (GB) allocated to a function during its execution (S). Oracle will charge You for the number of 10,000 GB-S quantities used by all functions in a month. Billing for partial 10,000 GB-S quantities will be prorated.

10,000 Requests Per Month: is defined as maximum of 10,000 Requests per Month, of the type of REST API Requests You use in the Oracle Cloud Service, including PUT, HEAD, POST, COPY, LIST, DELETE and GET.

Section 4 - Metrics and Metric Definitions (continued)

10,000 Transactions: is defined as the number of 10,000 character units processed by the Oracle Cloud Infrastructure Generative AI Service for on-demand base models, where a character is equal to a transaction. The number of characters includes the input request character count and the output response character count. If You process fewer than 10,000 characters in the Oracle Cloud Infrastructure Generative AI Service, You will be charged only for the fractional usage.

20,000 Messages Per Hour: is defined as the number of 20,000 message quantities used as part of the Oracle Cloud Service. A message is defined as up to 50 kilobytes (KB) of in-and-out transmission from/to the Oracle Cloud Service. Any message over 50KB in size must be counted as multiple messages, with each 50KB or portion thereof counting as equivalent to one message (e.g., 210KB would be counted as 5 messages). For the purposes of the Oracle Integration Cloud Service – BYOL (all editions), a message is calculated following these rules:

Integrations:

- o Trigger: Each trigger activity counts as at least one message, depending on the message size. If the inbound message payload exceeds 50KB, 1 additional message is counted for each additional 50KB (e.g., 210 KB would be counted as 5 messages).

- o Invoke: Invoke requests do not count as messages, but invoke responses that are greater than or equal to 50KB count as messages. If an invoke response message payload exceeds 50KB, 1 additional message is counted for each additional 50KB (e.g., 210 KB would be counted as 5 messages). If the invoke response message payload is less than 50KB, then the invoke response is not counted as a message.

- o File: For file-based scheduled flows where there are incoming files into integrations, each file is converted into a billed message (in multiples of 50KB) only when the file size is greater than or equal to 50KB.

Process Automation:

- o Each invocation of a process will incur a charge of one message.

- o Any active process instance running for more than one hour will incur an additional charge of one message per hour. An active process instance is defined as one that is currently in-progress and has not yet reached completion.

Decisions:

- o Each invocation of a decision will incur a charge of one message.

Integration Insight:

- o Each business transaction in Insight counts as one message.

Visual Builder

- o One concurrent user for the Visual Apps feature is equal to 100 messages.

Internal: The following internal calls within the same Oracle Integration Cloud Service instance are not counted as messages:

- o Visual Builder to Integration

- o Integration to Integration

- o Process to Process

Calling another Oracle Integration Cloud Service instance does incur messages in the target Oracle Integration Cloud Service instance, and, depending on the response size, may also incur messages in the Oracle Integration Cloud Service instance from which the call originates.

Any combination of message input, message output, concurrent users, or message sizes may be utilized concurrently, but must not exceed the maximum quantity of 20,000 Messages Per Hour that You set when You create an instance for the **100,000 Events Per Hour:** is defined as 100,000 events where an event is one distributed tracing span. A distributed tracing span describes the time it takes to complete an individual unit of work in the distributed system. Each distributed tracing span encapsulates an operation name, context information, a start and finish timestamp, a set of key value tags that can be used for annotation and key value logs that can be used to capture messages and debug information related to the span.

1,000,000 API Calls: is defined as 1,000,000 API calls or notifications (or combination thereof) incoming from a client to the Oracle Cloud Infrastructure API Gateway Service. Billing for partial 1,000,000 API calls will be prorated.

1,000,000 Calls Per Month: is defined as 1,000,000 API calls or notifications consumed by any application built on the Oracle Cloud Service during a month.

Million Datapoints: is defined as a count in the millions of the Oracle Cloud Infrastructure Monitoring Datapoints either ingested or retrieved for a Monitoring Metric.

Million Delivery Operations: is defined as the number of delivery operations in the millions performed by the Oracle Cloud Infrastructure Notifications Service, including retries to deliver messages to HTTPS endpoints. Each 8KB portion of delivered data is billed as 1 operation.

1,000,000 DNS Traffic Management Queries: is defined as 1,000,000 DNS Traffic Management queries received by the OCI authoritative DNS nameserver infrastructure during the monthly billing period. Oracle will charge You for the number of DNS Traffic Management queries received by the Public DNS Authoritative Service at a prorated cost of \$4.00 per 1 Million Traffic Management queries during the billing period (e.g., 100 Million Traffic Management queries received will be charged 100 x \$4.00 = \$400).

1,000,000 Function Invocations: is defined as 1,000,000 function invocations, where a function invocation is defined as a request received from a client to execute a single function. Oracle will charge You for the number of 1,000,000 invocation quantities used in a month. Billing for partial 1,000,000 invocation quantities will be prorated.

1,000,000 Incoming Requests Per Month: is defined as a collection of 1,000,000 page hits over HTTP/S incoming from a client on the internet or CDN to the Web Application Firewall.

One Million IO Requests Per Month: is defined as the maximum of one million requests during a calendar month of the Oracle Cloud Service of the type of Block Storage IO Requests You use in the Oracle Cloud Service.

1 Million Messages Per Month: is defined as the number of 1,000,000 message quantities per month used as part of the Oracle Cloud Service. A message is defined as up to 50Kb of in-and-out transmission from/to the Oracle Cloud Service. Any messages over 50Kb in size must be counted as multiple messages, with each 50Kb or portion thereof counting as equivalent to one message (e.g., 210Kb would be counted as 5 messages). One concurrent user for the process automation feature is equal to 400 messages. One concurrent user for the Visual Apps feature is equal to 100 messages.

1,000,000 Queries: is defined as the number of DNS queries received by the public authoritative DNS server at a prorated cost of \$1.00 per 1 million queries during the monthly billing period (e.g., 500 million queries received would be invoiced at 500 x \$1.00 = \$500).

1,000,000 Requests: is defined as the number of data plane operations received to or from an Oracle Cloud Service.

For the purposes of Oracle Cloud Infrastructure Queue Service, each request is defined as a 64 kilobyte request of one of the following data plane operations to the Oracle Cloud Service: push, get, delete and update. If a request exceeds 64 kilobytes (KB), the request will count as multiple requests (e.g., one 68KB delete operation will count as 2 requests).
